QP-019 Preventive Maintenance

1. Purpose and Scope

Keep the three production machines in QF-027 suitable for accepted work: CNC-MILL-001 (3040 Mach3 mill), CNC-LATHE-001 (CTMACH CQ6133 lathe) and MAN-MILL-001 (Grizzly G0704 manual mill), all at the single shop. Measurement equipment is controlled under QP-010.

2. Responsibility and Planning

The owner performs condition checks, sets applicable maintenance tasks and intervals, records completed work and confirms capability before use. Use manufacturer information, machine condition, usage, job requirements and general industry practice to select suitable tasks. Do not assume automated features, accessories, special test equipment or outsourced service arrangements not confirmed by the owner.

Before use, check cleanliness, lubrication needs, workholding/tool security and actual safeguards/controls. At least monthly while in use, review machine condition and applicable maintenance needs; perform scheduled tasks at the owner-established intervals recorded in QF-027 or linked QF-021 records. Job/customer requirements may require additional checks before production.

3. Maintenance and Verification

1. Select tasks appropriate to the actual machine, such as cleaning, lubrication, wear/looseness checks and condition of fitted components. Identify the machine and applicable items on QF-021; mark unused checklist items N/A.
2. Establish accuracy/alignment checks suited to the actual job and available owner-confirmed methods. This procedure does not prescribe a ballbar service or automatic-turret verification.
3. Stop use when a condition could affect safety or conformity. Correct it and verify suitable operation before returning to production, including full first-piece verification when the condition could affect product.
4. Record date, work performed, findings, action, owner initials, machine status and next maintenance due date/interval on QF-021 or its linked record.
5. Assess potentially affected product when a fault or maintenance finding could have affected previous work. Hold it and inspect every affected part for relevant characteristics by default; use a different extent only if specified or approved by the customer in writing. Apply QP-008 and customer notification where needed.

4. Records and References

Retain maintenance and product-impact records under QP-001 and SUP-003; apply the longest required retention period.

- QF-021 Preventive Maintenance Record; QF-027 Equipment List
- QP-001 Document Control; QP-006 In-Process Inspection; QP-008 Nonconforming Product Control; QP-010 Calibration and Measurement Control
- WI-005 First Piece Inspection; SUP-003 Record Retention Schedule
- AS9100 clause 7.1.3, for guidance only

5. Revision History

Rev	Date	Description	Approved By
A	2026-08-07	Initial release	Shop Owner

Revision B Approval

Approved 2026-11-05 by Jacob Honick, Owner. Use owner-confirmed machine-specific maintenance; remove unconfirmed automated features and prescribed specialist tests.
