QP-025 Control of Changes

Standards and clause references are guidance only and do not claim certification or standard compliance. Applicable customer, contractual and legal requirements govern accepted work.

1. Purpose

Define the process for evaluating, approving, implementing, and verifying changes to product, processes, or suppliers to ensure continued conformity and to meet customer notification requirements.

2. Scope

Applies to all changes that could affect product conformity, including customer-initiated drawing revisions, internal process changes, supplier changes, tooling changes, and equipment changes.

3. Responsibilities

Role	Responsibility
Shop Owner	Evaluate proposed changes for risk and impact, obtain customer approval when required, implement changes in a controlled manner, trigger re-validation (FAI) when applicable, maintain change records

4. References

- QF-029 — Change Notification Form
- QP-015 — Configuration Management
- QP-022 — First Article Inspection
- QP-024 — Work Transfer Control
- QP-003 — Purchasing and Supplier Management
- AS9100 Rev D Clause 8.5.6 (Control of Changes)

5. Definitions

- **Change Trigger:** An event or condition that initiates the change control process (new drawing revision, process improvement, supplier change, equipment replacement, etc.).
- **Risk Assessment:** Evaluation of the potential impact of a change on product conformity, customer requirements, and downstream processes.
- **Re-validation:** Verification (typically via FAI) that the changed process still produces conforming product.

6. Procedure

Change Triggers

1. Initiate the change control process when ANY of the following occur:
    - Customer issues a revised drawing or specification
    - Internal process change is proposed (different machining strategy, new tooling, new fixture, programming change)
    - Change of supplier for raw material or outside processing
    - Change of equipment used for a production operation
    - Change of inspection method or equipment for a critical characteristic
    - Corrective action requires a process change

Risk Assessment

1. Initiate QF-029 Change Notification Form. Document:
    - Description of the proposed change
    - Reason/trigger for the change
    - Affected part numbers, operations, and specifications
2. Assess the risk of the change:
    - Could the change affect product form, fit, or function?
    - Does it affect safety-critical characteristics?
    - Does it require customer notification or approval?
    - Does it trigger FAI per QP-022?

3. Record risk assessment findings on QF-029.

Approval Authority

1. Changes that do NOT affect product conformity (e.g., fixture material upgrade with same clamping, coolant brand change with same specification): Shop Owner approves internally. Document on QF-029.
2. Changes that COULD affect product conformity: require verification (FAI or documented first-piece) before full production release.
3. Changes that the customer contract requires notification of: obtain customer approval BEFORE implementing the change. Document approval on QF-029.

Implementation

1. Once approved, update affected documents:
    - Drawing Register (per QP-015) for customer drawing revisions
    - CNC Program Log (per QP-015) for program changes
    - Process plans, routers, or work instructions as applicable
2. The owner reviews the change before resuming affected operations and communicates applicable requirements to the customer and customer-approved suppliers.

Re-Validation / FAI Trigger Assessment

1. Determine if the change triggers FAI per QP-022 criteria:
    - Design change affecting form, fit, or function — full first-piece and acceptance inspection by default; formal FAI only when required by the customer under QP-022
    - Process change that could affect conformity — documented full first-piece verification; formal FAI when required by the customer under QP-022
    - Supplier change for material or outside processing — obtain required customer approval under QP-003 and verify all applicable material/process requirements
2. Perform required re-validation before releasing production quantities.
3. Record re-validation results on QF-029 (reference FAI number if applicable).

Customer Notification

1. Notify the customer before implementing changes when:
    - Contract or PO requires notification of process/source changes
    - The change affects a special process or customer-approved process plan
    - The change affects safety-critical characteristics
2. Document customer notification and response on QF-029.

Closure

1. Close QF-029 when: change is implemented, re-validation is complete (if required), and customer approval is documented (if required). Sign and date.

7. Records Generated

Form No.	Title	When Completed
QF-029	Change Evaluation Record	At initiation of each change through closure

8. Revision History

Rev	Date	Description	Approved By
A	2026-08-07	Initial release	Shop Owner

Revision B Approval

Approved 2026-11-05 by Jacob Honick, Owner. Standardize control metadata and annual review, remove fixed page counts and align applicable references and wording.
